

BOOM TANK CLEANER – GENERAL PURPOSE CLEANER

A powder based surfactant cleaner for use with boom sprays and general spraying equipment to remove pesticide residues and scale build up and to help clean spray nozzles.

Treatment with Boom Tank Cleaner should be carried out when changing between pesticide types and for end of season cleanup. This product will not remove all residues of SulfonylUrea herbicides.

FOR CLEANING OF SPRAYING EQUIPMENT

- DECONTAMINATES MOST PESTICIDE RESIDUES
- REMOVES STAINS AND SCALE DEPOSITS
- HELPS PROTECT FROM CORROSION

Use Rate 100 g/100 Litres – Repeat procedure required

- Essential for accurate spray performance

The carefully chosen and measured chemicals that are applied through a multipurpose spray tank / nozzle system risk a significant loss of effectiveness if

- a. Mineral and scale deposits block or impede the fine spray through nozzles leading to reduced or uneven deposition.
- b. Pesticide residues from former treatments contaminate the tank and lines which can cause incompatibility or result in damage to crops.

- Highly effective formulation of detergents and chelating agents

Boom Tank Cleaner is formulated with highly effective detergents and chelating agents which dissolve the scale build up caused by Calcium and Magnesium present in water and assist removal of pesticide residues.

- Safe to equipment and personnel

The solution of Boom Tank Cleaner is around pH 9.5 - 10 which means that it is non hazardous to spraying equipment and safe to use if used with good handling practice.

- Fluorescent colourant for easy identification

Boom Tank Cleaner has a special dye additive which imparts a fluorescent green colour to the spray tank solution as a safety precaution to alert operators to the need to empty the tank completely prior to addition of pesticides or fertilizers for application to crops.
