

ERADICATE

Incorporates the latest advanced green technology available, and significantly enhances the performance of Glyphosate, reduces spray drift and improves the penetration and plant uptake through the epicuticular wax.

ERADICATE significantly enhances the performance of Glyphosate.

- Reduces spray drift by reducing the percentage of fine droplets and driftable droplets
- Enhances the deposition and retention of glyphosate
- Tested and formulated for New Zealand conditions

Recommended rates* per 100L of water

SITUATION	RATE / 100L	CRITICAL COMMENTS
Herbicides, including Glyphosate	125 - 250ml	Use 125 - 250ml/100 litres of spray mixture when used as a surfactant/penetrant.
Desiccants and Defoliants	125 - 250ml	Use 125 - 250ml/100 litres of spray mixture when used as a surfactant/penetrant.
Fungicides, Pesticides, Plant Growth Regulators	65 - 250ml	Use 65 - 250ml/100 litres of spray mixture.
Drift Retardant	125 - 500ml	Use 125 - 500ml/100 litres of spray mixture. Higher rates provide better drift reduction.

*Always refer to the label before use.

GREEN CHEMISTRY ADVANTAGES

- Does contain sugar derived ethanol
- Contains no silicones
- Does contain food grade canola oil
- Contains renewable surfactant backbone
- Contains non-GMO soy lecithin
- Contains no methyl or methanol

Independent field trials in 2018 confirm that Eradicate performs as well, if not better, than competitive materials when mixed with glyphosate sprays.
